

HEAD COVER FOR A GOLF CLUB

ABSTRACT OF THE DISCLOSURE

A head cover for a golf club that is relatively simple use is provided. The head cover includes a cover body formed essentially of flexible, non-rigid material and a magnetic fastener. More particularly, the cover body defines an inner compartment for receiving at least the head of the golf club having an adjustable opening sized to provide easy access thereto. The magnetic fastener is disposed about the opening to at least partially shut the opening, thereby maintaining the head cover on the club head, once installed. As the fastener is operable via magnetic force, engagement and disengagement of the fastener is achieved without undue manipulation, thereby promoting frequent use of the head cover.
